

# Bund upgrading & relining

Glass reinforced plastic (GRP) lining gives new life to damaged and eroded bunds providing a long term secure environment for your tank storage.

GRP is an economical, versatile and hardwearing material, often installed at a fraction of the cost of rebuild. It can be combined with different resins and additives to offer chemical resistance to the most aggressive environment.

GRP offers a high strength to weight ratio as well as excellent impact resistance and good dimensional stability. It is seamless, easy to clean and non-corrosive.

Unlike cement, GRP is weatherproof so it can be used externally and requires virtually zero maintenance.

## Before

Internal wall and floor surfaces are prepared by grit blasting, or similar technique and failed surfaces repaired.

## After

A suitable GRP lining is selected and applied. Aquasentry can offer lining solutions to suit different site conditions including HDPE and Epoxy Resin.
