

Legislation and Specific Guidelines

The Aquasentry FloodAlarm detects when water levels rising outside your property

Send an alarm via text and email to alert you to the rising levels

Flashing Beacon providing a visual warning

Text up to 6 phone numbers of your choice

Email an additional 6 contacts

Year-long battery life

Remote install

Online monitoring system

Three stage warning systems

As flooding becomes increasingly more common many businesses are now no longer able to insure against these risks. Flooding can occur from many sources including groundwater, storm water run-off, blocked drains and sewers (sewer flooding) and rivers or lakes rising due to heavy rainfall. If you had more time to prepare for a flood how much of the damage do you think would be prevented?

The Aquasentry FloodAlarm system provides an early warning of rising water levels to ensure that you have time to put your flood defences in place to protect your home, business and valuables. The alarm can be connected into either existing site BMS or connected to a SMS or e-mail.

The system is installed where the rise of flood waters can be detected early, the levels can be set in accordance with your needs and can be set at different levels to allow you to ascertain the difference between rising flood levels and simple variances in water flow.

A key part of the FloodAlarm is the alert warning sent to vital personnel. Rising levels are then alerted by SMS texts and e-mails warning the recipient that action needs to be taken. This information is also recorded through the online management service.

The Aquasentry Flood Alarm provides that vital early warning to enables you to move valuable items away from the flood waters, ensuring business continuity, costs savings and personnel safety

The Environment Agency says "Don't let a flood drown your business. Floods are one of the most common and widespread of all disasters and are growing in frequency and severity due to the impact of global warming. Your business is more likely to flood than to burn down, so it is vital you prepare now. Make a flood plan that'll keep your business afloat if the worst happens. Preparing and putting in place a flood plan is the most important thing you can do to prepare your business for flooding.

Most businesses can save between 20 and 90 per cent on the cost of lost stock and movable equipment by taking action to prepare in advance for flooding."
