Alarm details inc. probes (if fitted)

Filter details inc. size (if fitted)

Oil levels

Silt levels

Condition of liquids within each unit

Condition of turrets and access chambers

Size & condition of manhole lids.

Aquasentry carry out Interceptor Inspection surveys covering the whole of the UK. All surveys are carried out by a fully trained engineer who will complete a detailed report. Each survey is comprehensive and will be completed for every unit on site.

During the survey any defective items will be noted and also reported back to site on the same day. Whilst on site our engineers will service any interceptor alarms and recalibrate them if required.

Upon completion of the survey we will be able to provide advice as to whether any of the units will require servicing and also if any of the filters (if fitted) need to be changed.

As part of the Aquasentry complete drainage maintenance package, we also offer full, internal interceptor inspections which are recommended every five years.

Offering supply, installation, inspection, maintenance, servicing and emptying of all forms of oil water separator systems, we offer the total package for your interceptor requirements.
