

Key Information

No mains power source required

15 minute probe check monitoring

Ability to monitor all interceptors from a localised or centralised point

Weekly call to web interface & date stamp to confirm all is working correctly

Password protected for your own site security (if required)

Reduces the need for manual inspection

Remote Response Facility

Legislation and Specific Guidelines

Environmental Damage Regulations 2009

Water Industry Act 1991

Water Resources Act 1991

Environmental Permitting Regulation 2010

ISO 14001

The Interceptor Monitor range acts as a warning system alerting the end-user to potential pollution incidents before they happen and enables end users to meet the Environment Agency's stringent guidelines relating to the monitoring and maintenance of interceptor monitors.

The Web Interfaced Monitor allows you to monitor every one of your sites in the UK remotely from one central location. The unit has a many benefits including:

- > Real time date stamped records for the Environment Agency
- > Awareness of any potential incidents immediately
- > Reduced health and safety risks and increased environmental compliance.

Product Installation

Easy to retro fit in existing installations or in remote locations. The unit requires minimal civils to be installed.

Provides 24/7 management of your systems. The increased notification facility ensures that any warnings are dealt with instantly, removing the reliance on a single individual with up to 12 email/text channels available for alert communication.

Remote monitoring reduces the need for manual handling, confined space inspection, reducing manpower requirements, open manholes and planned maintenance checks.

All interceptor monitors can be reviewed from anywhere in the world through the web interface. Individualised passwords mean only you have access to the site - your records are totally confidential. Different access levels can be set to provide site, region or national specific views, or allow for different security protocol.

Provides accurate and instant record keeping for environmental purposes such as a stamp to confirm all is working correctly for Environment Agency visits or ISO14001 accreditation.
